

PROPOSAL XXX

Silver Salmon Driftnet Fishing with standard length and 6 inch mesh drift net shall be allowed to driftnet in 4 B-C during daylight hours between August 15th thru 31st.

What is the issue you would like the board to address and why? Ruby would like to open a silver salmon coho drift net fishery in 4B&C when cohos are running well in late August. Window closures for king salmon earlier in the fishing season with less opportunities for fishing has increased the need for another chance to meet subsistence needs especially given the fact that climate change has altered silver set net fishing in the last 2 years with high river water, excessive debris and reduced harvest during silver set net openings for harvest.
