

Dave Blossom

Federal Brown Bear Study RC20

Total estimated 624 Brown Bears. Admittedly very conservative number.

What could the real number be?

203 - samples total

34 - known collared Brown Bears to be in study area

5 - Total number of samples from collared Brown bear.

14% - percentage of collared Brown bears sampled

$$\frac{203}{.14} = \textcircled{1450} \text{ real total Brown Bears}$$
